

**Height Safety**  
**Lifting**  
**Load Control**  
**Safety Management**

Suitable head protection forms an important part of the protective equipment required for many workers. When working at Height using the correct head protection can be even more important.

For those using personal fall protection equipment they not only need protection from falling objects, but also protection from the effects of colliding with other hazards during a fall. The SpanSet HP helmet made by KASK has been designed specifically for this situation and CE marked to EN14052 providing workers at height with the high level of protection they require at all times.

## Technology

### POLYGIENE

Polygiene inhibits the growth of bacteria on the fabric surface by preventing the cell division. The bacteria on the skin, the "natural skin flora", remains unaffected, Polygiene is homogenously distributed throughout the material.

### 2DRY

This fabric dries quickly, easing moisture expansion and evaporation. It keeps the body fresh, providing the maximum comfort.

### MICROMETRICAL ADJUSTMENT

Micrometrical adjustment mechanism placed on the back of the helmet.

### RING TO HOOK

Chinstrap provided with a ring to hook the helmet onto the harness.

### CHINPAD EN 14052

Chinstrap with four fastening points. Quick fastening and opening with a safety release system in compliance with the EN 14052. Provided with lateral divider or two soft polyethylene side retractors to adjust the straps length.

## Visor

Polycarbonate visors, anti-scratch and anti-fog treated, provided with a non-cut and non-drip rubber edging. Approved to CE EN 166 – EN14458

## Adaptors for Ear Defenders

Adaptor for ear defenders with a bayonet attachment.
