CAPCHA Vehicle Fall Protection Systems

**Height Safety
Lifting
Load Control
Safety Management**

Capcha Overhead Fall Arrest System

The problems and inherent dangers faced by operators working at height on commercial vehicle trailer beds during loading and unloading operations is fully recognised and well documented as a result of the increasing number of accidents.

The SpanSet Capcha system provides an easy to use solution, helping to reduce the risks posed by falls from vehicle trailers.

The **Capcha** fall arrest system has been designed for integration with the vehicle body. **Capcha** allows secure, unrestricted hands free access to the trailer platform. The system can also be used when it is necessary to work at height on the loaded goods.

The **Capcha** system is ideal for use with most types of curtainsided and double-deck trailers. The system fits snugly inside the roof of the trailer and does not obstruct loading or unloading operations. It is low maintenance, easy to install and is used in conjunction with the simple to use SpanSet Driver Harness.

The **Capcha** system can be accessed and easily retrieved from either side of the vehicle. **Capcha** may be specified as original equipment or can be retro-fitted to your fleet. A range of fitting options and installation kits are available to suit most vehicle configurations.

- Provides protection from ground level to the trailer and back to the ground.
- CE Approved to EN 795

1.
Simple, unobtrusive installation.

2.
Safe loading and unloading.

3.
Smooth running.

As well as being fitted to vehicles, the versatile Capcha fall arrest system can also be adapted to those situations where a permanent height safety arrangement is required at a fixed base or location.

Wherever personnel are working at height around or above a vehicle they can be at risk of sustaining injury as a result of a fall. In situations where it is impractical to fit a height safety system to the vehicle, Capcha can be installed within existing overhead superstructure to provide all the fall protection your staff need to carry out their tasks in complete safety.

Typical Installations Include:

- Maintenance Workshops
- Bodybuilding Shops
- Tanker Loading Gantries
- Tank Washes

Capcha can be configured to suit most applications.

Capcha is used in conjunction with the SpanSet Driver or 1-X Harness.

- Provides protection from ground level to the vehicle roof and back to the ground
- CE Approved to EN 795

1-X Harness

Extension strap.

Order Code: 1-X

- Lightweight Full Body Work Restraint and Fall Arrest
- Rear Fall Arrest Attachment
- Adjustable at leg loops, shoulders and chest
- Available in standard size
- Stainless Steel buckles and fittings
- Supplied with clear instructions and individually serial numbered certification for traceability
- Pocket Inspection Guide
- CE approved to EN361
- Also available the Atlas Harness designed for users up to 140kg
- Extension Strap for use with 1-X or Atlas Harness Systems. Allows easier attachment to lanyard.

DRIVER Harness

Order Code: DRIVER-XE

- Fully Body Harness for overhead Fall Arrest systems and Work Restraint in MEWP's
- Fall Arrest Attachment Point on integral extension strap, eliminating discomfort caused whilst driving by removing all metalwork from the rear of the harness.
- Adjustable at leg loops, shoulders and chest
- Available in standard size
- Stainless Steel buckles and fittings
- Fast clip buckles for ease of fitting and removal
- Hi-Vis jacket has concealed panels to fit larger operatives
- Supplied with clear instructions and individually serial numbered certification for traceability
- CE approved to EN361, EN354 and EN471
